"YOUR ASSURANCE OF BEAUTIFUL FLOWERS"

Season of 1942

Valentine

ORIGINATOR and GROWER

Please Read Carefully Before Ordering

ORDER EARLY—It avoids disapointment by eliminating the chance of the variety selected being sold out. However, we do not discriminate, our prices are the same in the spring as in the fall. Our stock is always guaranteed, early or late, our large storage facilities permit this.

GUARANTEE—We ship only first quality stock which grows easily. It is clean, insect pest and disease free, healthy and true to name. Every bulb is fully guaranteed as such. Should any prove otherwise, we will gladly replace or refund your original purchase price

SUBSTITUTION—We do not substitute unless directed to do so. However, a second choice is advisable if late in the season.

SIZE—Our bulb sizes are standard and liberal. No. 1—1½ inch and over; No. 2—1¼-1½ inches; No. 3—1-1¼ inches; No. 4—¾-1 inch; No. 5—½-¾ inch; No. 6—¼-½ inch.

Large—1¼ inches or more in diameter (Nos. 1 and 2).
Medium—¾ to 1¼ inches in diameter (Nos. 3 and 4).
Small—¼ to ¾ inch in diameter (Nos. 5 and 6).

QUANTITY—3 bulbs will be sold at the 10 rate; 25 at the 100 rate; 250 at the 1,000 rate.

SHIPMENTS—Weather conditions govern this largely. They usually start about March 15th. Unless otherwise directed.

DELIVERY—All retail orders amounting to $1.00 or more will be delivered free to all parts reached by Parcel Post. Orders amounting to less than $1.00 will add 15c for postage.

TERMS—Remittances should accompany your order, and should be made by check bank draft, American Express or Postal money order.

REFERENCE—For our standing, you may refer to:
The McDowell National Bank of Sharon, Pa.

PRICES—having a number prefix, as **2-.15,** means **2 for 15 cents.**
Prices as given in this catalog supersede all previous quotations.

SERVICE—As we are one of the largest producers of gladiolus, we offer the best, with courtesy, being fully appreciative of your patronage.

BEST FLOWERS—An exhibitor insists on a young bulb 1¼" or more in diameter. Bulbs over two years old usually do not produce the maximum of flower, and frequently are a source of trouble from disease.

BULB PERFORMANCE—For the maximum performance or exhibition spikes—**Large** (over 1¼") are much to be preferred. **Medium** (¾" to 1¼") bulbs are of blooming size but the flower is not as large and requiring more time to bloom. **Small** (¼" to ¾") bulbs will at times bloom late in the season and are noticeably smaller in size; **Bulblets** cannot be depended upon, either to bloom or for germination, many fail to grow under the very best of conditions.

"Your Assurance of Beautiful Flowers"

Our gladiolus bulbs are the best it is possible to produce. They are well grown, without pampering or irrigation, are scientifically harvested, cleaned and stored. They receive final inspection and preparation before delivery to you. They reflect this culture and care by giving you their beautiful bloom, the kind of bloom all flower lovers are looking for. Be sure to give them a trial—this season.

1942 STEWART INTRODUCTIONS

We offer two new gladiolus this year, each rating exceptionally high in every requirement of a god gladiolus. They are both winners.

CONCHITA—A beautiful clear tan-orange with crimson feather, tall, erect with six or more large flowers open at one time. Excellent habits. Fine commercial. Price each $10.00 any size bulb. Bulblets $1.00 each.

GAY—Very early light cerise pink, six or more large flowers open on a tall grand spike. Always erect. A real beauty, an exceptional commercial. Price each, $10.00 any size bulb. Bulblets $1.00 each.

STEWART SELECT GLADIOLUS

We thank you for your enthusiastic acceptance of our selections in past years and assure you this years are equally good IF NOT BETTER. BE CONVINCED—TRY THEM—ORDER NOW.

CARE AND CULTURE

THE GLADIOLUS can be successfully grown in practically any soil. They are easily grown and respond wonderfully to a little attention, such as timely watering and cultivation They will adapt themselves to most any garden and will be found doing much better than most flowers with an equal amount of effort by the grower, be he amateur or professional.

THE PACKAGE when received should be opened at once to admit air directly on bulbs—store in cool, dry and frost-proof place until planting time.

SOIL and LOCATION—Any good garden soil is very satisfactory; the soil should not be worked when wet, and should be kept pliable at all times during the growing season. They will not do their best in too much shade. They enjoy being planted in rows or in beds; they are valuable in the landscape, putting clumps of all one color or mixed at suitable points for the desired effect. The ground should be well drained for best results.

DISINFECTING—Precautionary measures guarding against insect pests and bulb troubles are very effective and most economical. The garden should be cleaned and the old tops of gladiolus as well as the tops of other plants and other refuse should be raked up and burned. The storage room should be clean and disinfected as well as the bulb containers before using them to store bulbs over winter. Disinfecting all bulbs before planting is an easy task and is advisable as it will practically eliminate any disease or insect pest. We offer but one method: this accomplishes all in one operation; use at the rate of one ounce of Bichloride of Mercury (poison) to 7 gallons water (B. of M. is more soluble in warm water). soak from 8 to 10 hours, the night before planting, (not necessary to remove husks); a simple procedure is to place bulbs in salt or sugar bags, tie strong string around top of bag, other end of string carrying the variety name on it, drop in solution, a stick will punch them under—after soaking, hang up by string to dry, or they may be planted wet. Use non-metallic container for the B. of M.

PLANTING—Have soil loose; make trench or hole deep enough so that bulbs can be covered with three inches of dirt, (sandy soil, five inches); plant bulbs three inches apart in the row. If fertilizer is used at planting time, keep at least two inches from bulb, by covering bulb with dirt before adding the fertilizer.

SPRAYING and THRIP—Thrip is a very small insect 1/16 inch, and the cause of most all gladiolus failures. It causes the plant to turn brown, and does not permit the development of a good flower. While this insect is no longer serious, preventative measures must be used. **Soak all bulbs** before planting, with bichloride of mercury as directed above. Thrip survive the winter in your storage, so take the bulbs to the garden in the container you soaked them in. Everything taken from the storage should be clean. Inspect the plants closely when small, start when they are 2" high—if thrip is detected spray daily until they are destroyed, then spray once a week, or as your case requires. They must all be destroyed before flower spike starts. Spray in the early evening, this gives a minimum of evaporation and permits the spray to spread more thoroughly. The best and most economical spray is Rototox—write them—The Rototox Co., 81 East Yale St., East Williston, N. Y. They will send you pamphlet on how to use Rototox, and prices.

WATER and CULTIVATION—Water thoroughly so that it will soak down to the bulb, at least once a week, but count a good rain as one; cultivate thoroughly next day if not sticky.

THE FLOWER—If you wish to cut the flower do it when the first flower opens wide. To get a nice spike with it, slide the knife down close to spike on one side stopping six to eight inches from ground, then slide it down the opposite side giving knife a twist at the bottom to remove spike with flowers; this operation cuts leaves from spike but they remain on the plant, which is essential to properly mature the bulb.

HARVESTING—Bulbs should be ready to dig three to six weeks after blooming, or dig when foliage starts to turn brown. Loosen bulb with fork or other tool and bulb will lift out by the top—shake dirt off—cut tops off close to bulb, let bulb fall in clean container (three inches deep), pile up tops for burning. Let bulbs cure three to six weeks in a dry, airy, frost-proof place, stir occasionally for thorough drying—they must be dry. When ready, the old root should snap off easily, leaving bulb clean; now store away for winter in containers (boxes or bags) not over four inches deep, in a cool, dry, frost-proof place.
